An integrated circuit or monolithic integrated circuit (also referred to as an IC, a chip, or a microchip) is a set of electronic circuits on one small flat piece (or "chip") of semiconductor material, normally silicon. The integration of large numbers of tiny transistors into a small chip results in circuits that are orders of magnitude smaller, cheaper, and faster than those constructed of ...

I had trouble with this for a little bit so I'm posting it if others want to know. The S0-S3 act as an address so if you're measuring multiple inputs coming from the C0-C15 side you set S0-S3 to that binary pin # and read it on the SIG pin.

A clock is an instrument used to measure, keep, and indicate time. The clock is one of the oldest human inventions, meeting the need to measure intervals of time shorter than the natural units: the day, the lunar month, and the year. Devices operating on several physical processes have been used over the millennia. Some predecessors to the modern clock may be considered as "clocks" that are ...

I am trying to build this circuit for a high school science project and can use a little help. To keep it simple I bought The CRO-SM1 Heater Driver Circuit, the 24V 15A DC PSU, and the prebuilt Induction Heater Coil (CT-400), water pump, and choke coil from an old microwave (picture attached).
