Xing et al. describe the tail of a non-avian theropod (coelurosaur) preserved in Burmese amber, combining bone outlines with microscopic details of plumage and integument. This specimen sheds new light on the appearance and evolution of plumage of dinosaurs, providing a direct association between amber-entombed plumage and body fossil material.

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...
