typedef is a reserved keyword in the C and C++ programming languages. It is used to create an alias name for another data type. As such, it is often used to simplify the syntax of declaring complex data structures

consisting of struct and union types, but is just as common in providing specific descriptive type names for integer data types of varying lengths.

Method overriding, in object-oriented programming, is a language feature that allows a subclass or child class to provide a specific implementation of a method that is already provided by one of its superclasses or parent classes. The implementation in the subclass overrides (replaces) the implementation in the superclass by providing a method that has same name, same parameters or signature ...
