Most Domestic and commercial buildings need a service hot water system. Depending upon the type of building, this system could range from as small as an under sink water heater for washing hands to a 10,000 gallon hot water storage tank system used in a hospital laundry.

An electrical grid is an interconnected network for delivering electricity from producers to consumers. It consists of Generating stations that produce electrical power; high voltage transmission lines that carry power from distant sources to demand centers; Distribution lines that connect individual customers.; Power stations may be located near a fuel source, at a dam site (to take advantage ...

### **Electrical grid - Wikipedia**

Current harmonics. In a normal alternating current power system, the current varies sinusoidally at a specific frequency, usually 50 or 60 hertz. When a linear electrical load is connected to the system, it draws a sinusoidal current at the same frequency as the voltage (though usually not in phase with the voltage).. Current harmonics are caused by non-linear loads.
