fundamentals database systems elmasri pdf

The enhanced entityâ€"relationship (EER) model (or extended entityâ€"relationship model) in computer science is a high-level or conceptual data model incorporating extensions to the original entityâ€"relationship (ER) model, used in the design of databases.. It was developed to reflect more precisely the properties and constraints that are found in more complex databases, such as in ...

Enhanced entityâ€"relationship model - Wikipedia

In computer science, a database cursor is a control structure that enables traversal over the records in a database. Cursors facilitate subsequent processing in conjunction with the traversal, such as retrieval, addition and removal of database records. The database cursor characteristic of traversal makes cursors akin to the programming language concept of iterator.

Storia dei database. All'inizio della storia dell'informatica, la grande maggioranza dei programmi specializzati consentivano l'accesso a una singola base di dati, per guadagnare in velocitÃ di esecuzione pur perdendo in flessibilitÃ .Oggi, invece, i moderni sistemi possono essere utilizzati per compiere operazioni su un gran numero di basi di dati differenti.
