The mathematical formulations of quantum mechanics are those mathematical formalisms that permit a rigorous description of quantum mechanics. Such are distinguished from mathematical formalisms for theories developed prior to the early 1900s by the use of abstract mathematical structures, such as infinite-dimensional Hilbert spaces and operators on these spaces.

upconvolution, or (iii) attempting to resolve the confusion, as in [28], which awkwardly refers to deconvolution (deconvolution). As another example, generative models are traditionally models of either the input distribution  $p(x)$  or the joint distribution  $p(x,y)$ .
