A differential equation, shortly DE, is a relationship between a finite set of functions and its derivatives. Depending upon the domain of the functions involved we have ordinary differential equations, or shortly ODE, when only one variable appears (as in equations (1.1)-(1.6)) or partial differential equations, shortly PDE, (as in (1.7)).

Elementary Differential Equations with Boundary Value Problems is written for students in science, engineering, and mathematics who have completed calculus through partial differentiation. If your syllabus includes Chapter 10 (Linear Systems of Differential Equations), your students should have some preparation in linear algebra.

While it is primarily Ordinary Differential Equations (ODEs), it also has some material on Partial Differential Equations and Total Differential Equations. I like having an electronic copy of Ince as well as a hard copy, although some of the equations are slightly difficult to read on-line.

I've seen questions on what are some good differential equations textbook and people generally points to Ordinary Differential Equations by Morris Tenenbaum and Harry Pollard and so on. I was wondering if there are any free (GNU free documentation license, CC, or alike) textbooks on the subject.
