Units of measurement. Both gas and liquid flow can be measured in volumetric or mass flow rates, such as liters per second or kilograms per second, respectively. These measurements are related by the material's density. The density of a liquid is almost independent of conditions.

Compressible flow (gas dynamics) is the branch of fluid mechanics that deals with flows having significant changes in fluid density. Gases, mostly, display such behaviour. While all flows are compressible, flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less than 0.3 (since the density change due to velocity is ...

Development of single-enantiomer drugs was also made possible by asymmetric synthesis and chiral separation techniques. Several guidelines dealing with chiral drugs (FDA's, 1992, Health Canada, 2000, European medicines agency, 1996) have been published which encouraged the development of single enantiomer drugs for pharmaceutical manufacturers.. The quality of chiral drugs was stipulated by ...
