From PLAYING & REALITY

In 1953, Donald Winnicott introduced the term 'transitional object' to describe those blankets, soft toys, and bits of cloth to which young children frequently develop intense, persistent attachments. Winnicott theorized that such T.O. attachments represent an essential phase of ego development leading to the establishment of a sense of self.

Theories of Transitional Object Attachment: An Overview

The transitional object, in a "potential space"™, or the intermediate space between internal and external reality, is where creative experimentation can take place, safely and without fear.

For Winnicott, the function of transitional objects - which exist in the 'potential space' between objectivity and subjectivity - is to help children make the transition from dependence to self-reliance.

Workshop Title: Transitional Objects

The transitional objects preserve the illusion of symbiosis with the mother, thus allowing the infant the illusion that what the infant creates really exists. It mediates the inevitable disillusionment process inherent in the gradual establishment of ego
