Using FEM to compare tube forming processes Analyzing residual strains, stresses. The Tube & Pipe Journal January/February 2008 January 15, 2008 By: Budi Francisco Finite element analysis (FEA) software developed specifically for roll forming can help tube producers determine the best forming process for tube (such as single-radius forming, edge forming, or partial-step forming).

The basic end forming methods are segmented tool sizing, ram forming, rotary forming, roll forming, and spinning. The latter three have specific advantages in working around the circumference of a tube, especially where sharp angles and radical diameter changes require working the tube more gradually.

Tube end machining - sealed tight In systems of tubes or lines, the connection between the tube and the connected component is often the weak point. This means that tube ends have to be machined with exceptional accuracy.
