strength of individual members and of offshore platform subframes weakened by damage due to overload and/or by dents and distortions caused by ship impact or falling objects. In addition to the operational and environmental loads, an offshore platform may be subjected to impact by ships or heavy falling objects.

Residual Strength of Offshore Structures After Damage

Request PDF on ResearchGate | Tubular Members in Offshore Structures | This book presents a state of the art summary of theory, behaviour and design of tubular members used in offshore installations.

∅ tubular members shall be modelled. ∅ Risers & Caissons shall be modelled as structural elements that attract wave loads ∅ (without contribution to the jacket stiffness).

Offshore Structural Design - Structural Engineering Forum

To outline and explain the best methods for forming structural connections in offshore deck structures; to discuss the importance of a proper choice of connection type to achieve both the required strength and stiffness, and ease of fabrication.

ESDEP WG 15A: OFFSHORE STRUCTURES Lecture 15A.12

differences are determined for tubular members which are the main part of jacket structures. Keywords: APIWSD, ISO 19902, Offshore Jacket Platform, Tubular Member Stresses 1. INTRODUCTION Offshore Jacket Platforms are normally designed using one of the following offshore design codes: API RP2A WSD [1], API RP2A LRFD [2] or ISO 19902 [3].

TUBULAR STRENGTH COMPARISON OF OFFSHORE JACKET STRUCTURES

Offshore platforms are in most of the cases constituted by tubular steel members. In this paper, the response of tubular members to ship bow impacts is analyzed by means of FEM calculations.

These additional tubular members can include, for example, horizontal tubular member 17, diagonal tubular members 18, and diagonal horizontal tubular members 23. In FIG. 1, a plurality of risers or riser pipes 19 are shown extending between the seabed 12 and the water surface 13 such pipes can be conduits to oil/gas wells.

US8628275B1 - Structural bonded repair method for

The steel template type structure consists of a tall vertical section made of tubular steel members supported by piles driven into the seabed with a deck placed on top, providing space for crew quarters, a drilling rig, and production facilities. The fixed platform is economically feasible for installation in water depths up to 500m.

Dr.S.Nallayarasu - gcsolutions.ir

The inelastic cyclic behaviour of tubular members in offshore platforms and the characteristics and limitations of the phenomenological, physical theory and finite element (FE) models for predicting the hysteretic behaviour of braces are reviewed.

Hysteretic modelling of tubular members and offshore

NPTEL :: Ocean Engineering - Design of Offshore Structures

Steel tubular members are widely used as primary and secondary structural framing members in offshore oil and gas platforms. A platform is inherently liable to collisions from ships which can ...
